

Policy evidence playbook

Contribution intake review · Run 1042 · Pack 0.1.0

The contribution remains unresolved because the required privacy scan is missing. A separate objection about the proposed rollout also needs human assessment.

Context

The submitted playbook describes a consultation evidence workflow using synthetic records. The question is whether it may enter the repository; this pack does not determine consultation consensus or authorize a rollout.

Required evidence

Automated check receipt — record of content tests and skill validation.	Provided
Privacy scan log — check for person-level data in submitted records.	Missing
Source register verification — registered sources and access conditions.	Provided

The supplied files have not been assessed for adequacy. Their presence alone does not establish that the contribution is acceptable.

Findings & uncertainty

Evaluation completed and requested maintainer review. A retained scope note says, “The source register covers the pilot, but not the expanded rollout.” Its relevance remains unresolved.

Human review

A reviewer confirmed the underlying interpretation’s wording. That review does not settle the scope objection or approve the contribution. No human contribution decision is recorded.

Next decision

Ask the contributor for the privacy scan and the maintainer to assess the scope objection. Evaluate the new evidence in a linked run; keep this result and brief unchanged.
